EXPERIENCE

Scaler AI Labs

May 2026 – Present

SDE Intern — Full-Stack & RL Environments

Bengaluru, India

- Building production-grade reinforcement learning environments from 0→1 for confidential enterprise AI clients using **Next.js**, **FastAPI**, **TypeScript**, **SQLAlchemy**, and **Docker**.
- Shipped features across frontend, backend, database design, and containerized deployments in rapid **2-week** cycles, with **GitHub Actions** CI/CD pipelines pushing images to **AWS ECR**.
- Contributing across multiple RL environments spanning communication, observability, and financial analytics platforms.

Undivided Capital (Project Kalam)

Mar 2025 – Jun 2025

SWE Intern — Data Automation & Applied ML

Bengaluru, India

- Engineered multi-source data acquisition pipelines across **Wellfound**, **GrowthList**, **Cloudways**, and **RocketReach**, processing **2,300+** startup records at near **100% scraping success**.
- Built resilient browser-automation workflows with Selenium and PhantomBuster, handling retries, session invalidation, anti-bot constraints, and long-running batch executions.
- Structured **7K+** combined data points (startup metadata + traction/news signals) for a founder-intelligence platform powering investment-screening workflows.
- Sustained large-scale batch pipelines running **90+** hours, ensuring stable collection, structured parsing, and downstream dataset reliability.

PROJECTS

Intelligent RAG Assistant

Tech: LangChain, Ollama, ChromaDB, Streamlit

- Built a local RAG system supporting PDF ingestion, persistent vector storage, and real-time querying using LangChain, ChromaDB, and Ollama.
- Implemented retrieval optimization, grounded prompting, and chunk attribution to improve answer traceability while reducing hallucinations.

LeetCode Helper

Tech: React, Node.js, Express, LLM APIs

- Built an AI coding mentor that generates progressive hints and guided explanations without revealing complete solutions using LLM APIs.
- Developed a responsive React frontend with Markdown rendering, syntax highlighting, and LeetCode URL parsing, backed by Node.js and Express APIs.

In-Memory Key-Value Store

Tech: Java, TCP, Concurrency

- Built a concurrent, TCP-based in-memory key-value store in Java using ConcurrentHashMap and ExecutorService for thread-safe operations.
- Implemented TTL-based eviction, persistent client connections, and RESP-inspired request parsing with binary-safe responses.

EDUCATION

Scaler School of Technology

2023 – Present

Undergraduate Program in Computer Science

Bangalore, India

CGR: 7.96

Birla Institute of Technology and Science (BITS)

2023 – Present

B.Sc. (Hons.) in Computer Science

Distance Learning

CGPA: 8.42

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, TypeScript, Bash/Shell Scripting
Backend & APIs	FastAPI, Node.js, Express.js, RESTful APIs, SQLAlchemy, JWT Authentication, WebSockets
AI / LLM Systems	LangChain, Ollama, ChromaDB, RAG, Prompt Engineering, Context Management
Data & ML	scikit-learn, Pandas, NumPy, Feature Engineering, Data Pipelines
Distributed & Systems	Multithreading, Concurrency, HDFS, Apache Spark, Hive
Frontend	React, Next.js, React Native, Tailwind CSS, Streamlit
DevOps & Tools	Docker, GitHub Actions, AWS ECR, CI/CD, Linux, Git, Postman
Data Collection	Selenium, BeautifulSoup, PhantomBuster

LEADERSHIP & VOLUNTEERING

Head of Department — Proshows

Yugaantar '25

Scaler School of Technology

Bengaluru, India

- Led execution of large-scale proshow events, coordinating multiple stakeholders and vendors while managing scheduling and real-time operations under high-pressure timelines.
