EXPERIENCE

RubixKube

Jan 2026 – Present

Software Development Engineer Intern

Bengaluru, India

- Leading development of cloud observer agents in Go to collect infrastructure telemetry and logs from AWS and GCP environments, enabling automated monitoring and diagnostics at scale.
- Designed an event-driven architecture using NATS messaging to stream infrastructure events and telemetry across distributed system components with low-latency delivery.
- Developed backend services and REST APIs to aggregate, process, and expose telemetry data for internal monitoring, debugging, and AI-driven tooling.

BLive

Dec 2024 – Aug 2025

Software Development Engineer Intern

Bengaluru, India

- Engineered an end-to-end rider onboarding platform supporting 3PL and Pure Rental models with multi-stage workflows: eKYC verification, vehicle allocation, and location prioritization.
- Built an automated invoice management system that reduced manual invoicing effort by **40%** and improved overall billing accuracy and efficiency.
- Developed scalable REST APIs and a multi-channel communication infrastructure (Email, SMS, WhatsApp) achieving **~99%** message delivery reliability for operational notifications.

PROJECTS

Nexus – Contextual AI Memory Infrastructure

Tech: Go, SQLite, Ollama, MCP, Embeddings, FTS5

- Built a local-first AI memory engine with 2-layer stable/dynamic context, 6 memory categories, confidence decay, and SQLite FTS5 persistence.
- Implemented hybrid retrieval using embeddings, lexical search, recency, category, and confidence scoring, with bounded 2K-vector candidate scans.
- Shipped 9 MCP tools and 16+ CLI workflows for memory search, context injection, LLM-based inference, persona routing, and prior health checks.

Redis-like In-Memory Cache

Tech: Java, Netty, ConcurrentHashMap, Multithreading, Distributed Systems

- Built a high-performance in-memory key-value store in Java using Netty, implementing a custom asynchronous HTTP server to handle concurrent client requests with minimal latency.
- Designed a sharded cache architecture (512 shards) using ConcurrentHashMap and ReadWriteLocks to maximize parallelism and reduce lock contention under high concurrency.
- Optimized request throughput using event-driven Netty pipelines, thread pools, and atomic data structures, achieving **~50K+** operations/sec in local benchmarks.

EDUCATION

Scaler School of Technology

Jul 2023 – Present

Undergraduate Program in Computer Science

Bengaluru, India

- Current CGR (equivalent to CGPA): **8.46**

BITS Pilani (in association with Coursera)

Jul 2023 – Present

B.Sc. (Hons.) in Computer Science

Bengaluru, India

- Current CGPA: **8.63**

TECHNICAL SKILLS

Languages	Python, Go, JavaScript, Java
Backend & Frameworks	Node.js, NestJS, Express.js, Spring Boot, FastAPI
Cloud & DevOps	AWS, GCP, Kubernetes, Docker, Linux, Shell Scripting
Distributed Systems	NATS, Event-Driven Architecture, REST APIs, Microservices
Databases	PostgreSQL, MongoDB, SQL
Core Concepts	Data Structures & Algorithms, OOPs, DBMS, System Design

VOLUNTEERING

Placement Committee, Scaler School of Technology

Mar 2026 – Present

Operations Team

Bengaluru, India

- Execute end-to-end logistics for on-campus placement drives, coordinating schedules, venues, and student communications to ensure smooth execution.
- Manage student data pipelines including eligibility tracking, shortlisting, and status updates across multiple concurrent hiring drives.
